

Curriculum Statement for DT

At Connaught Junior School we aim to develop pupils' technical and creative skills, enabling them to understand how products are designed and made, build and evaluate prototypes and apply knowledge of materials and systems. Key aspects include a focus on problem-solving in various contexts, understanding nutrition and cooking, and critiquing the work of others, all to prepare them for an increasingly technological world.

We believe Design and Technology is an inspiring, rigorous and practical subject. Using creativity and imagination, pupils design and build projects that solve real and relevant problems within a variety of contexts, considering their own and others' needs, wants and values. They acquire a broad range of subject knowledge and draw on disciplines such as mathematics, science, engineering, computing and art. Pupils learn how to take risks, becoming resourceful, innovative, enterprising and capable citizens. Through the evaluation of past and present design and technology, they develop a critical understanding of its impact on daily life and the wider world. At Connaught we aim to deliver an inclusive, high-quality design and technology education which contributes to the creativity, culture, and well-being of every child.

Connaught

Junior School

"Caring, Confident, Committed"
